

QUINTING
TRANSPARENT LUXURY

A word from Pascal Berclaz

Dear Watch Connoisseurs,

As true luxury objects, Quinting watches appeal to dreamers who are looking for what they desire. Quinting watches are a Swiss masterpiece. They represent the tradition of Swiss watchmaking and its future. Besides providing highly innovative and exceptional products, we provide a mystery: the mystery of transparency, the mystery of Quinting.

Pascal Berclaz
President and CEO of Quinting SA

History

The idea of designing a completely transparent watch has occupied the greatest minds in the watchmaking profession for more than 100 years. All attempts to achieve the dream of seeing the hands of time floating on wrists failed and everybody remained convinced it was impossible to realize. Quinting manufacture's 5 engineers launched watch making into a new era by making this dream a reality. Millions of dollars were invested throughout 7 years of research and development. The result was the first and only 100% transparent chronograph in the world. The first prototype that was released in 1999 was immediately recognized with the prestigious "Prix Officiel de la Revue des Montres" award.

Quinting's movement

Quinting's movement is impossible to copy. The movement holds several patents. No fakes exist, nor will they. It is the first and only 100% transparent movement, and the first and only sapphire movement. Quinting's movement is made possible by superimposing several thin, previously metalized, sapphire discs treated with an antireflection coating.

It is with this very complicated system of stationary and moving sapphire discs that the watch runs. Quinting watches are made up of more than 230 parts. They are all water resistant up to 50 meters and come with a two year guarantee. The watches are assembled by hand by the most skilled watchmakers at the Quinting manufacture in Geneva, Switzerland.

The extremely delicate operation of creating Quinting's movement is performed in a white room (dust free) to ensure perfect transparency. The sapphire mechanism is an advanced technique that requires the most elevated level of meticulousness and knowledge. Sapphire discs are not elastic like the metal discs that are present in other complicated watches.

Quinting's exclusive sapphire movement demands the highest quality workmanship and absolute precision from the watch maker, placing Quinting watches among the most sophisticated and complex on the market.

Mysterious

Mysterious Chronograph

Quinting's Mysterious Chronograph is a masterpiece of precision, made of noble and precious materials. This exclusive object of perfection and technical prowess does not go unobserved and arouses an irresistible urge to touch and possess. Beautiful and exclusive, with its distinctive look and uncompromising Swiss quality, this is one of the most exceptional chronographs in the world that expresses originality and offers its owner a unique personality.

The Mysterious Chronograph is composed of 11 superimposed sapphire discs that permit the watch to display the hour, minute and date, as well as chronograph hour, minutes, and seconds. With its generous 43.80 mm diameter case that is water-resistant to 50 meters, this extraordinary chronograph escapes from the classical criteria of appreciation and is considered as the reference for the new generation.

Cyclone

In 2004, after 4 years of additional research and development, Quinting manufacture revolutionized the watch-making industry once again by launching the Cyclone, Quinting's answer to Abraham-Louis Breguet's Tourbillon. The Cyclone was created to counterbalance forces of gravity and synergy based on brusque movements of the wrist, whereas the tourbillon compensated the effects of gravity for pocket watches. This is the first movement in the world with counter balancing forces, invented for the second hand.

The elegant case of the Cyclone has a diameter of 38 mm. The watch is composed of 9 perfectly parallel sapphire layers, 4 (hour, minute, second, and false seconds) of which are mobile.

Mysterious

Mysterious Quardinal

Majestic and enigmatic, this timepiece houses a completely transparent movement made of sapphire, the sacred gemstone, symbol of wise rulers and the divine. It was worn only by kings and high-ranking priests such as popes and cardinals.

The movement of The Mysterious Quardinal is made by superimposing 9 thin toothed discs of sapphire. This complicated system is composed of 3 stationary and 4 rotating sapphire discs that put in motion the hour, minute, and date hands as well as the small seconds at 6 o'clock.

With a case diameter of 43.8 mm, the Mysterious Quardinal is the embodiment of the royal splendour that surrounded mysterious cardinals who were often more influential than their kings.

WYSLIM

Mystiq

Quinting watches possess the mystical power of attraction. With the same dimensions as Quinting's Mysterious Chronograph, Mystiq is Quinting's two hand model. The hour and minute hands seem to float on the wearer's wrist, as if suspended by magic.

Seven sapphire discs specially plated and treated with an antireflective coating give the dial its perfect transparency. This complex watch emerges from an entirely "mysterious" fabrication technology that is unique to the world.

Mystiq

A close-up, monochromatic photograph of a hand holding a pen nib over a small, circular metal plate. The plate has a central pin and some faint markings on its surface. The background is dark and out of focus, with some blurred shapes that could be other objects or parts of the hand. The overall mood is artistic and focused.

Art

Co1

Art Collection

Quinting introduces you to its Art Collection, one that consists solely of unique pieces. Quinting's 100% transparent watches with a layered sapphire movement are a blank canvas for original art. With our artists' skills and creativity we were able to create hand painted, stunning one-of-a-kind pieces. Enamel used on Quinting watches provides a different effect than when used on any other. Our watches have internal discs made of sapphire, eternal as diamonds. The paintings last forever, similar to stained glass one may find in the oldest cathedrals, but all the more durable. Each unique watch frames an original work of art. The paintings were made using the finest materials. A steady hand, a special paint brush and high quality enamel paint give a colorful new life to these Quinting watches.

When Quinting's artists put their imaginations to work, they can create any one of a kind piece; the following watches are just two examples of all the possibilities.

lection

The Moonlight

Quinting continues to WOW the watch making community with firsts: the first and only transparent watch, the first and only watch with a sapphire movement, the first and only watch with counterbalancing forces. Now Quinting releases yet another first: The Moonlight. Quinting created a movement exclusively for this watch, the only “true” moon phase watch. It is the first in the world where the moon revolves around the earth, accurately showing its phases. Meanwhile, every hour a comet shoots around the earth and the moon, always ready to be wished upon. This limited edition is composed of 360 unique pieces, representing the 360 degrees of the earth. Each piece will have a different view of the earth, painted by hand with enamel.

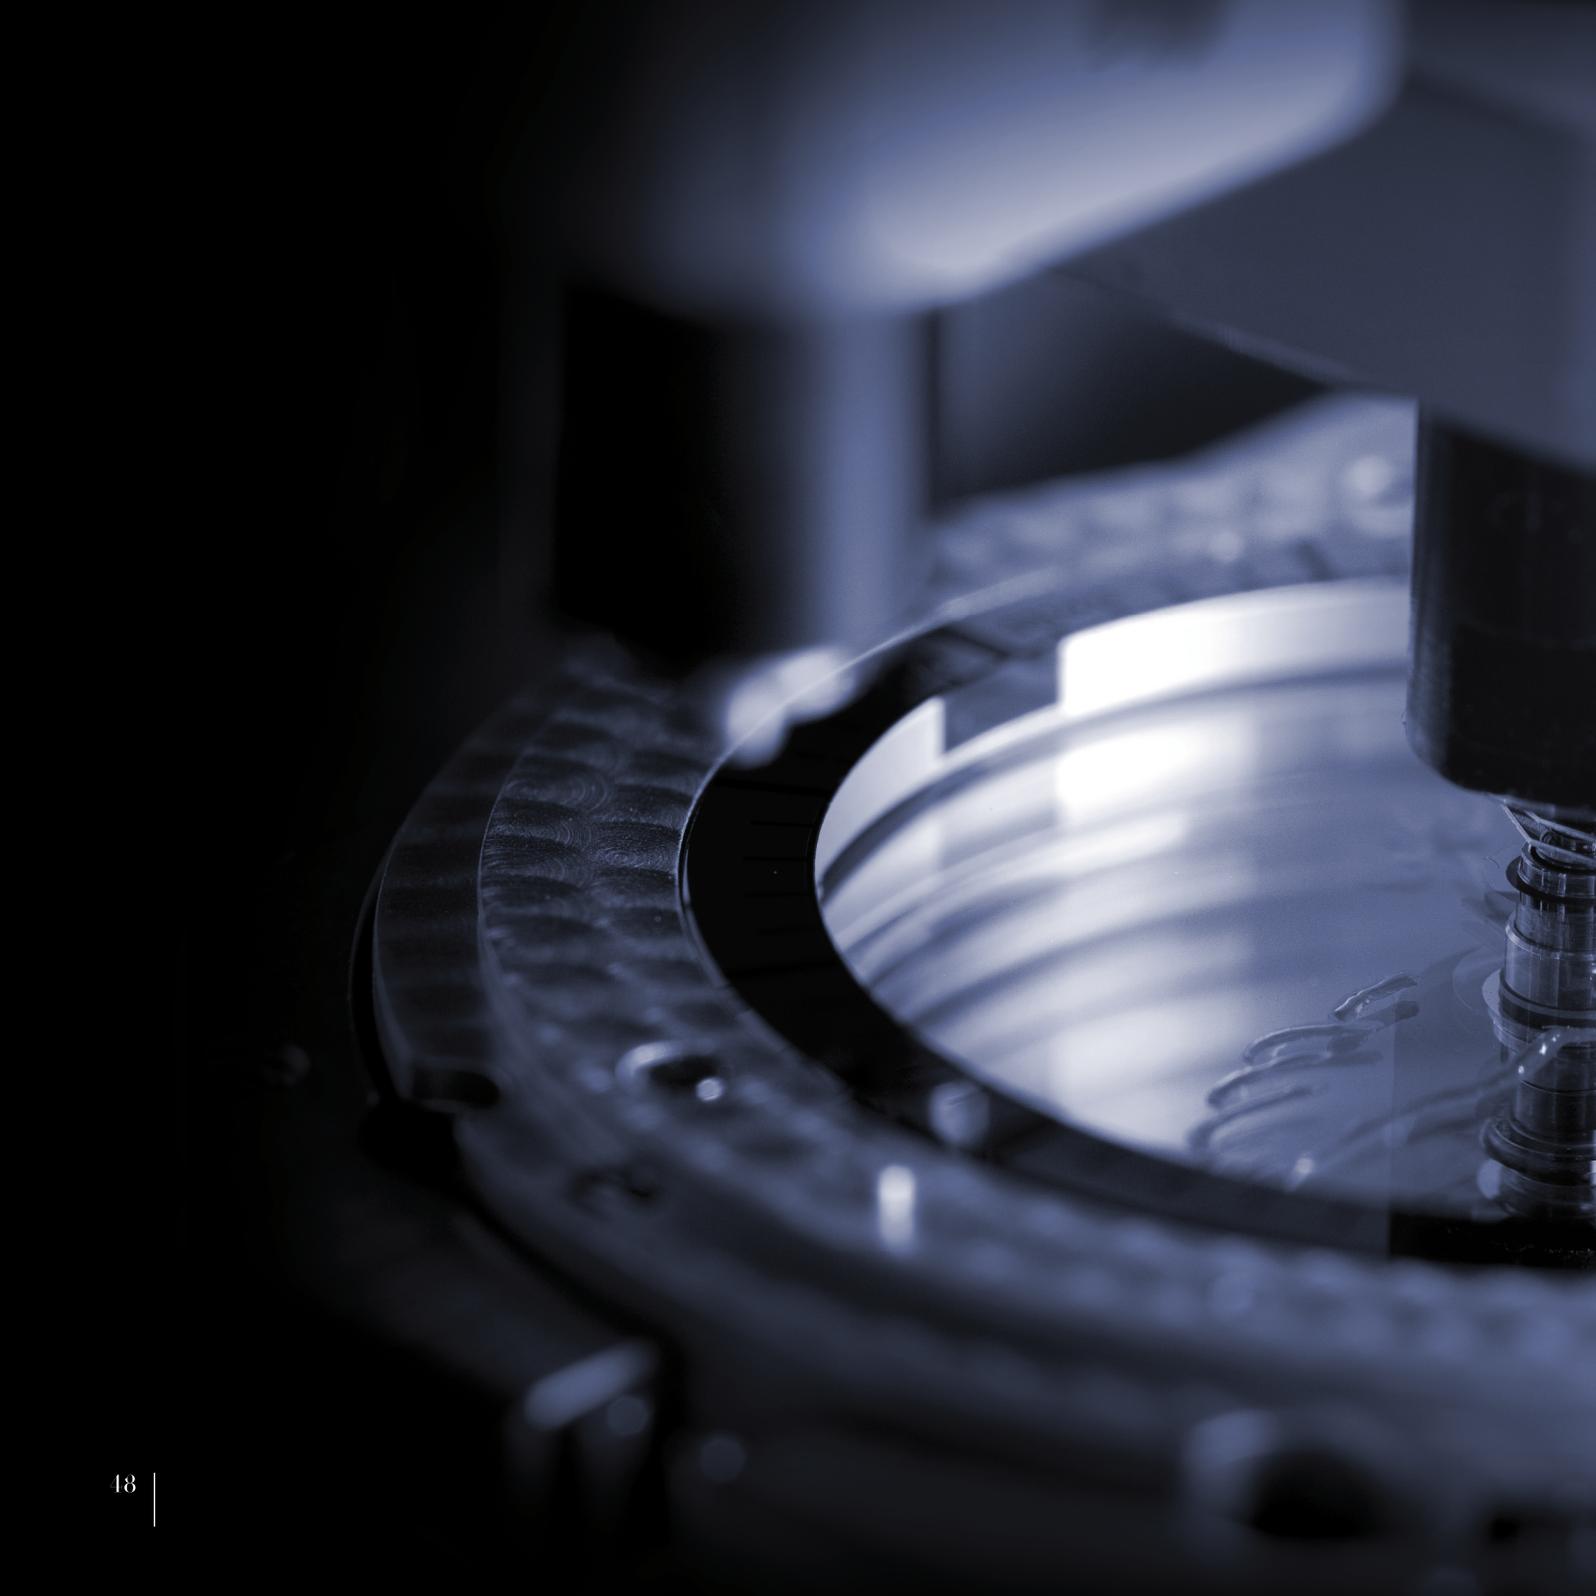

Art Collection

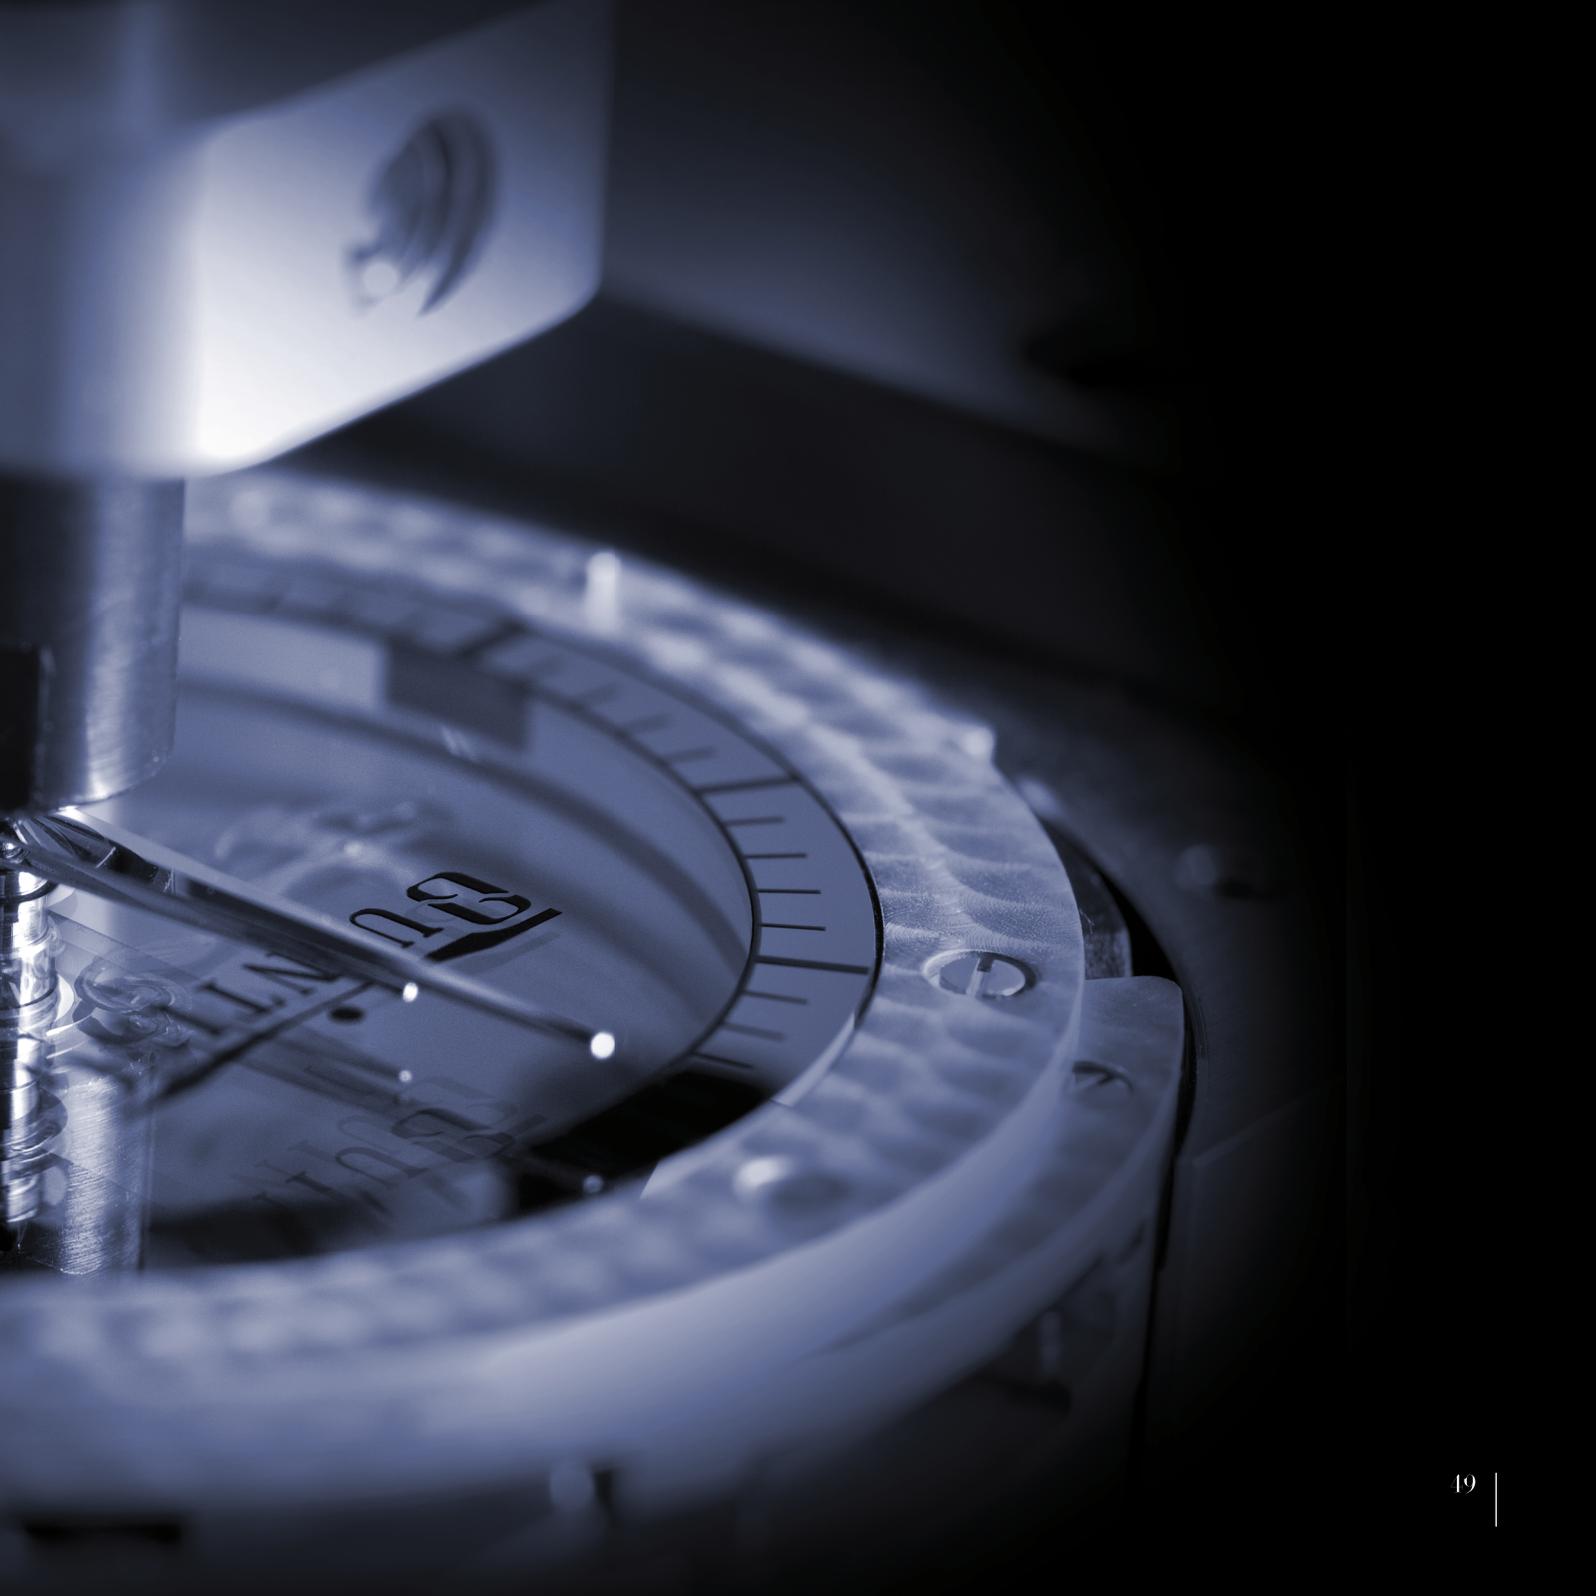

The Cherry Blossom

Two animated birds fly around a cherry blossom in bloom. These exotic birds naturally find their place in paradise on earth among the beautiful blossoms of a cherry tree. Within Asian culture cherry blossoms represent feminine power and beauty. Wearing this watch enforces the embodiment of these traits.
